

MHP AddOn Supplier Assessment

MHP AddOn Supplier Assessment Version 7.0

The consulting solution for SAP – reliable, transparent, flexible

Background

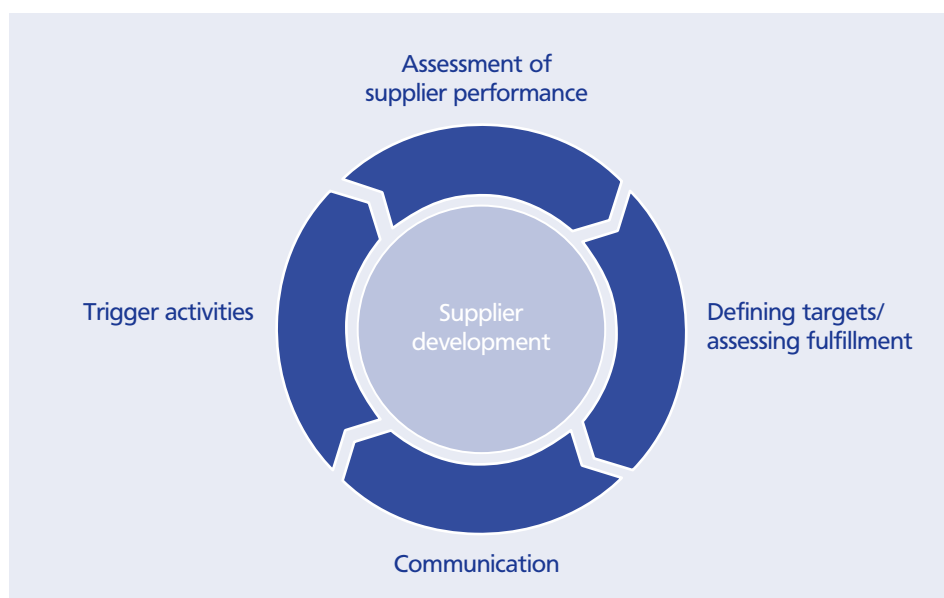

On competitive markets with low vertical integration, comprehensive and transparent procurement and supplier management is increasingly vital to success.

The MHP Supplier Assessment AddOn Version 7.0 serves as an instrument for reliably measuring supplier performance. Optimization potential can thereby be identified and acted on plausibly. The assessment of a supplier is based on hard and soft facts and can be used to assess internal delivery performance within a corporation too.

Many companies already use the MHP Supplier Assessment AddOn as a tool for controlling strategic and targeted supplier development.

Supplier management and development

The figures calculated in SAP serve both the administrator on the operations level and management in strategic perspective. Important statements from the fields of logistics, quality and technology are observed both in detail and globally. Overviews allow the comparison of suppliers and show development trends. Deviations can be explained in detail through the analysis of individual documents. A traceable assessment of supplier performance allows effective supplier man-

agement – as required in the framework of an ISO certification (e.g. ISO/TS 16949).

The calculated data offer a reliable basis for communicating with suppliers, for instance in supplier meetings or for target agreements on supplier development.

Analyses

The figures are available for the selected period in individual analyses or in aggregate form in a range of different displays:

- ABC classification of suppliers (according to VDA 6.1 four-step classification)

- In-depth analysis (ALV Grid) of data, e.g. month, quarter, year
- Analysis according to factory, procurement unit, supplier and other definitions
- Supplier assessment according to VDA recommendation 5001

The results can be presented in reports, communicated and forwarded directly to management as an instrument of supplier development. The data can also be forwarded to the SupplyOn platform or SAP Business Warehouse by standard integration.

Structure and indicators

The MHP Supplier Assessment AddOn is a consulting solution for SAP systems which significantly simplifies and accelerates supplier management projects.

Key supplier assessment indicators in logistics are:

- Quantity adherence
- Deadline adherence
- VMI/consignment handling
- Kanban delivery

To assess quality:

- Parts per million assessment
- Quality indicator from SAP QM
- Complaint rate

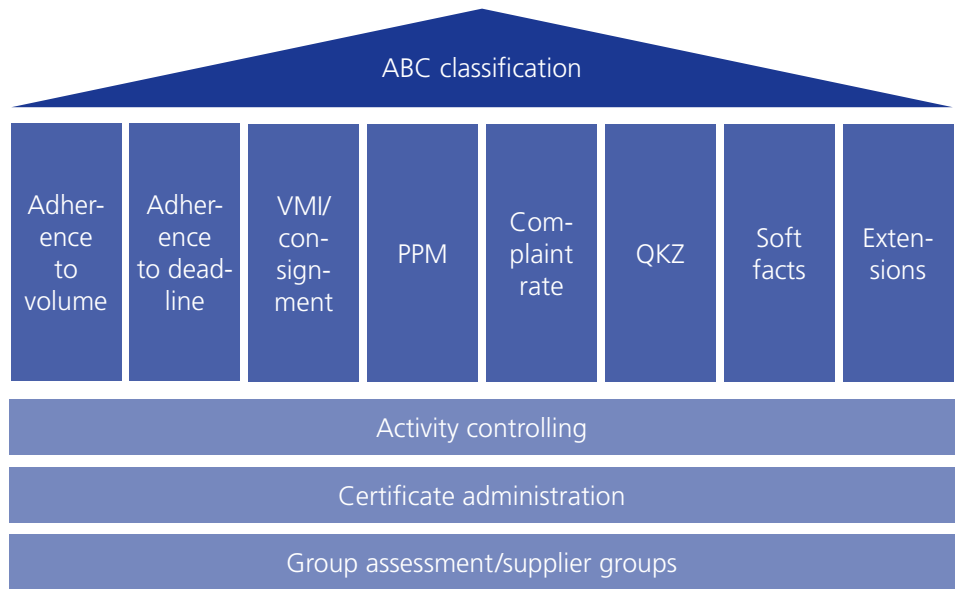

To complete the overall picture:

- Flexible, freely definable soft facts
- Integrated own indicators as extensions

Indicators can be combined with predefined weightings to achieve calculated sub-grades. Based on the results, suppliers can be classified as A, AB, B or C suppliers.

Special features of the consulting solution

- Simple handling and clear presentation of results.
- Overall results can be broken down into details.
- Manual revisions can be traced.
- Variable customizing options.
- Definition of exceptions and tolerances in master data.

- Customer requirements can be integrated into the standard and thereby updated continuously.
- Upgrading to a higher version is very simple.

Customer benefits

The MHP consulting solution AddOn Supplier Assessment Version 7.0 combines the know how from more than 80 customer projects. Today, our customers use the AddOn throughout their corporation or in individual units as a strategic tool for supplier development.

Even in its standard version, the consulting tool is a ready-to-work solution with fast, cost-effective implementation. It is available for various SAP releases (4.6C, 4.7, SAP ERP).

As a consulting template, it also provides a solid, trusted basis for individual consulting projects in supplier assessment and development. MHP offers implementation of the standard consulting solution at a fixed price.

The solution comes with the following services:

Implementation of the consulting solution through:

- A transport order
- Concept workshop, introduction to functions and program presentation
- Development of test examples
- User handbook and configuration guidelines in German and English

MHP is also happy to provide support in supplier development projects.

Benefit from our experience!
