

# Serverless Transformation Factory

## A migration offering

To support clients in scope of assess, mobilize, migrate and especially modernize phases to develop fully scalable serverless architectures based on either customer needs or transforming legacy applications. MHP is offering a full-service approach to migrate and modernize current customer workloads from the initial business value analysis to setting up the complete DevOps organization. Furthermore, the modernized customer workloads can be provisioned and operated on the MHP Foundation.

## The MHP Serverless Transformation Factory concept

Provides companies an implementation guide and various services provided by AWS to accelerate their migration to the AWS Cloud – even for large migration to the AWS Cloud – even for large migration projects involving multiple applications.

### Services

- Covering the whole migration, optimization and transformation process
- Providing and operating the AWS Landscape for the modernized customer workloads

### Possible Extensions

- Cost optimization, to give the customer the ability to run systems to deliver their business values at the lowest price point
- Innovative security service, to help the customer meet their own regulatory and security requirements

## From the initial business value analysis To setting up the complete DevOps organization

Simplifying the move to the cloud and eliminating long cut-overs and escalating costs
